

PFIZER INCORPORATED TERRE HAUTE
TERRE HAUTE, INDIANA

The Pfizer Incorporated facility, of Terre Haute, Indiana, manufactures pharmaceutical products. The facility is a member of the Indiana Department of Environmental Management 100% Club.

ENVIRONMENTAL PERFORMANCE

Past Accomplishments

Pfizer Incorporated Terre Haute has demonstrated its commitment to environmental improvement through perpetuating zero releases and reducing total solid waste. Since 1998, the facility has:

- **Perpetuated zero releases** of reportable releases and reduced non-reportable releases from 15 in 1996 to 3 in 2000. This was accomplished by updating old systems and machinery, as well as investigating the cause of releases and taking action to fix it.
- **Reduced total solid waste** 31% by increased recycling of product ash, paper, corrugate, metals, and through the use of bulk raw materials instead of bagged. The facility also increased antibiotic yields to reduce mycelium volume per unit antibiotic produced.
-

Future Commitments

Pfizer Incorporated Terre Haute is working to increase habitat area and landfill remediation at the facility, as well as to reduce total energy use and reduce total solid waste. By 2003, the facility will:

- **Increase habitat area** by creating 30 acres of habitat by removing foreign species to promote the growth of indigenous species.
- **Increase landfill remediation** by creating 34 acres of remediated landfill.
- **Reduce total energy use** by 5% by changing 3 fuel oil fired burners with one natural gas fired burner. This will then eliminate heating one oil tank, will increase efficiency and increase capability to reduce steam venting.

AT A GLANCE:

Industry Sector:	SIC 2833
Business:	Manufactures pharmaceutical products
Facility Employees:	100-499
Accomplishments:	Perpetuating zero releases Reduce total solid waste
Commitments:	Increase habitat area Increase remediation Reduce total energy use Reduce total solid waste
Address:	100 Pfizer Drive Terre Haute, Indiana 47802

- **Reduce total solid waste** 25% by recycling fly ash and insulin packaging, increasing boiler use to reduce coal use, and eliminating mycelium filter cake.

COMMUNITY OUTREACH

The Pfizer Incorporated Terre Haute facility updates the community through the local environmental planning committee, and also contacts the local Audubon chapter, the local government and other community groups. Community updates will be given through community groups, press releases and through direct contact. The annual performance report will be made available through employee briefings, the newspaper, and also the facility web site at www.pfizer.com/ehs
